

EMAIL RESPONSE TO MRS. EUNICE - HANDOVER DOCUMENT CLARIFICATIONS

Subject: Re: Website Handover Agreement - Important Clarifications Needed

Dear Mrs. Eunice,

I hope this email finds you well.

Thank you for sharing the Website & Social Media Handover Agreement. I have carefully reviewed the document and appreciate the thoroughness.

However, I must bring to your attention some important technical clarifications that need to be made to the document before I can sign it. These clarifications are necessary to ensure accuracy and avoid confusion, as the document currently references systems that don't apply to the redesigned website.

CLARIFICATIONS NEEDED

1. LOGIN CREDENTIALS SECTION

Current Document States:

"Complete and secure list of all necessary administrative login credentials including:

- Website CMS (Content Management System)
- Website Hosting Account
- Domain Registrar Account
- Third-party service accounts"

Issue: The new website is built with **Next.js framework** (not WordPress), and therefore:

- ❌ There is NO traditional CMS (Content Management System) like WordPress
- ❌ Domain Registrar Account credentials are already with your organization
- ❌ Previous cPanel/Hosting credentials are already with your organization

What I Will Actually Provide:

-  **Vercel Account** - Modern hosting platform for the Next.js website
-  **GitHub Repository Access** - Complete code backup and version control
-  **Google Analytics Access** - Website traffic monitoring (if applicable)

Suggested Revision: Replace the credentials list with:

"Transfer of the following login credentials:

- Vercel Hosting Platform Account (for the new Next.js website)
- GitHub Repository Access (version control and code **backup**)
- Google Analytics **Access** (website **monitoring**)

Note: **Domain** registrar, email hosting, **and** previous WordPress/cPanel credentials will remain **with** Workers' **Rights Watch as previously established.**"

2. SOCIAL MEDIA PLATFORMS SECTION

Current Document States:

"Full access and administrative rights to:

- Facebook Page
- Instagram Account
- YouTube Channel
- X (formerly Twitter) Account
- LinkedIn"

Clarification: Regarding social media accounts, I want to clarify the current status:

What Has Already Been Done (February 18, 2025):

- All social media login credentials were transferred to Workers' Rights Watch
- Cynthia (Programs Officer) already has full administrative rights and can edit all accounts
- All accounts have been functioning well for almost a year now

My Current Role (Security Protection Only):

- I have been maintaining the **Two-Factor Authentication (2FA) backup codes** for security purposes only
- This 2FA layer has been protecting your organization's accounts from unauthorized access
- No issues or security breaches have occurred during this time

Question: Since Cynthia already has full administrative access to all social media accounts and can manage/edit them, I'm unclear why this section is included in the handover document. The accounts were transferred almost a year ago.

If You Need the 2FA Codes: I'm happy to provide the 2FA backup codes to complete the security handover. However, please note:

- Once I provide these codes, I will be completely removed from account security
- Ensure Cynthia or your team saves these codes securely
- You'll need them for any new device logins or security verification

Suggested Revision:

"Social Media Accounts Status:

Note: Login credentials and administrative access were previously transferred to Workers' Rights Watch on February 18, 2025. The Programs Officer currently has full administrative rights to all accounts.

The Developer will provide Two-Factor Authentication (2FA) backup codes for complete security handover:

- Facebook Page (2FA codes)
- Instagram Account (2FA codes)
- YouTube Channel (2FA codes)
- X/Twitter Account (2FA codes)
- LinkedIn (2FA codes)

The Developer has been maintaining these 2FA codes for security protection purposes only and has no other access or control over the accounts."

3. STAFF GUIDANCE SECTION

Current Document States:

"Guide staff on:

- How to update and edit existing website content
- Correct procedure for uploading and linking new resources (PDFs, media files)
- General process for publishing and sharing new pages or posts"

Important Technical Reality: Unlike WordPress, Next.js requires coding knowledge for all content updates. This is not something that can be done through a visual dashboard.

What Training I Will Provide:

-  How to monitor website performance via Vercel dashboard
-  How to review contact form submissions and job applications
-  How to request content updates from the developer
-  Understanding website analytics and traffic reports

Critical Point About Content Updates: All website content updates (text changes, new pages, PDF uploads, image additions) **must be handled by a developer or someone with coding knowledge**. The Programs Officer can reach out to me for any adjustments needed, and I will handle them.

Regarding Maintenance Fee: I understand the budget is tight right now. While the contract includes a monthly maintenance fee (KES 5,000/month for up to 2 hours of updates), I will continue to handle update requests as they come in for now. Once you secure a donor or your budget improves, we can formalize the maintenance arrangement.

Important: The developer must remain in the loop for all technical aspects of the website. This is not optional - it's a technical requirement of the Next.js platform.

Suggested Revision:

"Staff Guidance:

The Developer will provide training **on**:

- Monitoring website performance through the Vercel dashboard
- Reviewing contact forms and job applications submitted through the website
- Requesting content updates from the developer
- Understanding website analytics and visitor statistics

IMPORTANT TECHNICAL REQUIREMENT:

Unlike WordPress, **Next.js** requires coding knowledge **for all** content updates. The Programs Officer or designated staff can request updates (text **changes**, **new** pages, PDF uploads, images) from the developer, who will implement them.

The developer must remain involved **for all** website updates and technical matters. Content **update** requests should **be** sent via email (kibeenock7390@gmail.com) or WhatsApp (0735663656).

Ongoing Maintenance:

- Covered under maintenance agreement (KES 5,000/month includes **up to** 2 hours)
- Developer will handle **all** technical aspects of website management
- Regular updates and support **as** per signed contract"

4. ADDITIONAL CONTEXT NEEDED

Background Section: I recommend adding a brief background section to the document explaining:

"BACKGROUND:

This handover agreement covers the redesigned Workers' Rights Watch website, built using Next.js framework and hosted on Vercel platform (replacing the previous WordPress/cPanel setup). The new website offers improved performance, security, and reliability."

This will provide context for why the credentials and processes differ from traditional WordPress sites.

SUMMARY OF CHANGES NEEDED

1. **Section 1 (Credentials):** Replace CMS/Domain Registrar with Vercel/GitHub (NOT previously transferred items)
2. **Section 2 (Social Media):** Clarify that login credentials were already transferred Feb 18, 2025; only 2FA codes remain to be handed over
3. **Section 3 (Staff Guidance):** Emphasize coding requirement; developer must remain involved for all updates
4. **Add Background:** Brief explanation of Next.js/Vercel hosting and technical dependencies

MY COMMITMENT

Once these clarifications are made to the document, I will:

✅ Sign the revised agreement immediately ✅ Provide all Vercel and GitHub credentials ✅ Provide social media 2FA backup codes ✅ Conduct comprehensive training session (2 hours included in contract) ✅ Provide written documentation for all processes ✅ Ensure smooth transition and ongoing technical support ✅ Remain available for all website updates and technical matters

NEXT STEPS

Option 1: I can prepare a revised version of the handover agreement with these corrections and send it to you for review.

Option 2: You can make these edits to your document and send me the updated version to sign.

Option 3: We can schedule a brief call to discuss these points and finalize the document together.

Please let me know which option you prefer, and I will proceed accordingly.

REGARDING SOCIAL MEDIA ACCOUNTS & 2FA

To provide complete context on the social media situation:

Timeline & Current Status:

- **February 18, 2025:** I transferred all social media login credentials (email + password) to Workers' Rights Watch
- **Since Then:** Cynthia (Programs Officer) has full administrative rights and can edit all accounts (Facebook, Instagram, YouTube, X/Twitter, LinkedIn)
- **Almost 1 Year:** All accounts have been functioning perfectly with no security issues
- **My Current Role:** I only maintain the 2FA (Two-Factor Authentication) backup codes for security protection

What is Two-Factor Authentication (2FA)?

- Extra security layer that requires both password AND a security code for new logins
- Protects accounts from unauthorized access
- I've been keeping the backup codes to ensure account security

What I Will Provide During Handover:

- 2FA backup codes for all platforms
- Instructions for managing 2FA on your devices
- Security recommendations

Important Note: Once I provide these 2FA codes, I will be completely removed from your social media accounts. Please ensure Cynthia or your team stores these codes securely, as they'll be needed for any new device logins or security verifications.

The accounts have been secure and well-managed for almost a year now. I'm happy to complete this final handover of the 2FA codes.

I hope this clarifies the technical differences and requirements. I'm committed to ensuring a smooth and professional handover, and these updates to the document will ensure accuracy and prevent any confusion down the line.

Please let me know if you have any questions or if you'd like me to prepare the revised document for your review.

Looking forward to hearing from you.

Best regards,

Enock Kibe Ngunyi

Website Developer
