

# Website Content Management Guide

---

## For Workers Rights Watch (WRW)

---

**Welcome!** This guide will help you update content on your website yourself. Most updates are straightforward - you just need to edit text and file paths in the code.

## Table of Contents

---

1. [Getting Started](#)
2. [How to Update Twitter/X Posts](#)
3. [How to Update Gallery Images](#)
4. [How to Update Resources](#)
5. [How to Update Partners](#)
6. [How to Update Impact Statistics](#)
7. [How to Update Hero Carousel](#)
8. [How to Update Focus Areas](#)
9. [How to Add Images to Your Website](#)
10. [What You Can Do vs. What Requires Help](#)
11. [Common Issues & Solutions](#)

## Getting Started

---

### What You Need:

- Access to the website code (usually through GitHub or your hosting platform)
- A code editor (VS Code is recommended, but any text editor works)
- Basic understanding of file paths and text editing

### Important Files:

- **Main Homepage:** `app/page.tsx` - This is where most content lives
- **Images:** `public/` folder - All images go here

## Before Making Changes:

1. Always make a backup or work on a copy first
2. Test changes before making them live
3. Keep the formatting - don't break the code structure

## How to Update Twitter/X Posts

---

### Location in Code:

Open `app/page.tsx` and find the section around **line 214** that looks like this:

```
const tweetIdDateMap = [  
  { id: '1988158507603173464', date: '2025-11-11' },  
  { id: '1985240770732048883', date: '2025-11-03' },  
  // ... more tweets  
];
```

### Steps to Add a New Tweet:

#### 1. Get the Tweet ID:

- Go to your tweet on X/Twitter
- Look at the URL: <https://twitter.com/Workersrights24/status/1988158507603173464>
- The number at the end ( 1988158507603173464 ) is the Tweet ID

#### 2. Get the Date:

- Note the date the tweet was posted
- Format it as: YYYY-MM-DD (e.g., 2025-11-15 )

#### 3. Add to the List:

- Add a new line in the `tweetIdDateMap` array:

```
{ id: 'YOUR_TWEET_ID_HERE', date: '2025-11-15' },
```

- **Important:** Add it at the TOP of the list (before the existing tweets)
- The newest tweets should be first

#### 4. Example:

```
const tweetIdDateMap = [  
  { id: '1999999999999999999', date: '2025-11-15' }, // NEW TWEET - Add here  
  { id: '1988158507603173464', date: '2025-11-11' },  
  { id: '1985240770732048883', date: '2025-11-03' },  
  // ... rest of tweets  
];
```

## 5. Save and Deploy:

- Save the file
- The website will automatically show the new tweet (newest first)

## To Remove Old Tweets:

- Simply delete the line with that tweet's ID
- Or comment it out by adding `//` at the start: `// { id: '...', date: '...' },`

## Tips:

- Keep the date format consistent: `YYYY-MM-DD`
- Always add new tweets at the top
- The website automatically sorts by date (newest first)

## How to Update Gallery Images

---

### Location in Code:

Open `app/page.tsx` and find the section around **line 305** that looks like this:

```
const galleryImages = [  
  {  
    id: 1,  
    title: "Exchange Program Workshop",  
    description: "Participants engaging in cross-cultural learning...",  
    image: "/Exchange program pictures/ep1.jpg",  
    category: "Exchange Program",  
    location: "Nairobi, Kenya"  
  },  
  // ... more images  
];
```

## Steps to Add a New Gallery Image:

### 1. Add Your Image to the Website:

- Put your image file in the `public/` folder
- Note the file path (e.g., `/my-new-image.jpg` )

### 2. Add to the Gallery Array:

```
{
  id: 5, // Use the next number (currently goes up to 4)
  title: "Your Image Title",
  description: "Description of what's in the image",
  image: "/your-image-path.jpg", // Path from public folder
  category: "Training", // Options: "Training", "Exchange Program", "Health", "Gender Equalit
  location: "Location Name, Kenya"
},
```

### 3. Example:

```
const galleryImages = [
  // ... existing images ...
  {
    id: 5,
    title: "New Training Session",
    description: "Workers participating in rights awareness training.",
    image: "/new-training.jpg",
    category: "Training",
    location: "Nairobi, Kenya"
  }
];
```

## To Remove an Image:

- Delete the entire object `{ ... }` for that image
- Or comment it out with `//`

## Category Options:

- "Training"
- "Exchange Program"
- "Health"

- "Gender Equality"
- Or create your own category name

## How to Update Resources

---

### Location in Code:

Open `app/page.tsx` and find the section around **line 373** that looks like this:

```
const homepageResources = {  
  articles: [ ... ],  
  reports: [ ... ],  
  videos: [ ... ]  
};
```

### Adding a New Article:

#### 1. Add Image:

- Put image in `public/` folder

#### 2. Add to Articles Array:

```
articles: [  
  // ... existing articles ...  
  {  
    title: "Your Article Title",  
    content: "Brief description of the article content...",  
    image: "/article-image.jpg",  
    category: "Training" // Or any category  
  }  
],
```

### Adding a New Report:

#### 1. Add PDF and Image:

- Put PDF in `public/` folder
- Put report cover image in `public/` folder

#### 2. Add to Reports Array:

```
reports: [  
  // ... existing reports ...  
  {  
    title: "Your Report Title",  
    content: "Brief description of the report...",  
    image: "/report-cover.png",  
    downloadUrl: "/report-file.pdf", // Path to PDF file  
    category: "Research" // Or any category  
  }  
],
```

## Adding a New Video:

### 1. Add Thumbnail Image:

- Put thumbnail in `public/` folder

### 2. Add to Videos Array:

```
videos: [  
  // ... existing videos ...  
  {  
    title: "Your Video Title",  
    content: "Description of the video content...",  
    image: "/video-thumbnail.jpg",  
    duration: "15:30", // Format: "MM:SS" or "HH:MM:SS"  
    videoUrl: "https://www.youtube.com/watch?v=YOUR_VIDEO_ID",  
    category: "Training" // Or any category  
  }  
],
```

## Tips:

- Keep descriptions brief (1-2 sentences)
- Use high-quality images
- For YouTube videos, use the full URL

## How to Update Partners

---

## Location in Code:

Open `app/page.tsx` and find the section around **line 20** that looks like this:

```
const partners = [  
  { name: "Anti-Slavery International", logo: "/asi.jpg", url: "https://www.antislavery.org/" },  
  // ... more partners  
];
```

## Steps to Add a New Partner:

### 1. Add Partner Logo:

- Put logo image in `public/` folder
- Recommended size: 200-400px width, transparent background if possible

### 2. Add to Partners Array:

```
const partners = [  
  // ... existing partners ...  
  {  
    name: "New Partner Name",  
    logo: "/new-partner-logo.png",  
    url: "https://www.newpartner.org/"  
  }  
];
```

## To Remove a Partner:

- Delete the line with that partner
- Or comment it out

## Tips:

- Keep logo file names simple (no spaces, use lowercase)
- Ensure logo URLs are correct
- Partners will appear in the scrolling showcase automatically

## How to Update Impact Statistics

## Location in Code:

Open `app/page.tsx` and find the section around **line 698** that looks like this:

```
{[
  {
    number: 50000,
    label: "Workers Empowered",
    description: "Through education, awareness...",
    image: "/pic1.jpg",
    icon: <Users className="h-8 w-8 text-teal-500" />
  },
  // ... more stats
].map((item, index) => (
```

## Steps to Update a Statistic:

### 1. Update the Number:

```
{
  number: 60000, // Change this number
  label: "Workers Empowered",
  // ... rest stays the same
}
```

### 2. Update the Description:

```
{
  number: 60000,
  label: "Workers Empowered",
  description: "Updated description text here...",
  // ... rest
}
```

### 3. Change the Image:

```
{
  number: 60000,
  label: "Workers Empowered",
  description: "...",
  image: "/new-stat-image.jpg", // Change image path
  // ... rest
}
```

## To Add a New Statistic:

- Add a new object in the array (currently has 4 items)
- Follow the same format as existing ones

## Available Icons:

- `<Users />` - For people/workers
- `<Scale />` - For legal/justice
- `<Shield />` - For protection/security
- `<FileText />` - For documents/reports

## How to Update Hero Carousel

---

### Location in Code:

Open `app/page.tsx` and find the section around **line 45** that looks like this:

```
const heroItems = [  
  {  
    type: "image" as const,  
    src: "/wfa4.jpeg",  
    alt: "Workers in action",  
    title: "Workers Empowerment",  
    description: "Empowering farm workers with knowledge..."  
  },  
  // ... more items  
];
```

## Steps to Add/Update Hero Images:

### 1. Add Image to Website:

- Put image in `public/` folder

### 2. Add to Hero Items:

```
{  
  type: "image" as const,  
  src: "/your-hero-image.jpg",  
  alt: "Description for screen readers",
```

```
    title: "Your Title",
    description: "Brief description text"
  },
```

## To Add a Video (Optional):

```
{
  type: "video" as const,
  src: "/your-video.mp4",
  alt: "Video description",
  title: "Video Title",
  description: "Video description"
},
```

## Tips:

- Use high-quality images (recommended: 1920x1080px or similar)
- Keep titles and descriptions short
- Currently shows 4 items - you can add more

## How to Update Focus Areas

---

### Location in Code:

Open `app/page.tsx` and find the section around **line 606** that looks like this:

```
{[
  {
    icon: <Shield className="h-8 w-8 text-teal-500" />,
    title: "Workers' Rights",
    content: "Ensuring fair treatment and safe working conditions...",
  },
  // ... more focus areas
].map((item, index) => (
```

## Steps to Update:

### 1. Update Title:

```
{  
  icon: <Shield className="h-8 w-8 text-teal-500" />,  
  title: "Updated Title",  
  content: "...",  
}
```

## 2. Update Content:

```
{  
  icon: <Shield className="h-8 w-8 text-teal-500" />,  
  title: "Workers' Rights",  
  content: "Your updated content text here...",  
}
```

## 3. Change Icon:

- Available icons: <Shield /> , <Users /> , <Scale /> , <FileText /> , <ArrowRight />
- Keep the format: <IconName className="h-8 w-8 text-teal-500" />

## To Add a New Focus Area:

- Add a new object to the array
- Follow the same format

# How to Add Images to Your Website

---

## Step-by-Step:

### 1. Prepare Your Image:

- Recommended formats: .jpg , .png , .webp
- Recommended size:
  - Hero images: 1920x1080px
  - Gallery images: 1200x800px
  - Partner logos: 200-400px width
  - Thumbnails: 800x600px

### 2. Name Your File:

- Use lowercase letters

- Use hyphens instead of spaces: `my-image.jpg` not `My Image.jpg`
- Keep names descriptive but short

### 3. Upload to Website:

- Put the image file in the `public/` folder
- The path will be: `/your-image-name.jpg`

### 4. Use in Code:

- Reference it as: `"/your-image-name.jpg"`
- Always start with `/` (this means it's in the public folder)

## Image Path Examples:

- File location: `public/new-photo.jpg`
- Code reference: `"/new-photo.jpg"`
- File location: `public/partners/logo.png`
- Code reference: `"/partners/logo.png"`

## Tips:

- Optimize images before uploading (reduce file size)
- Use descriptive file names
- Keep images organized in folders if you have many

## What You Can Do vs. What Requires Help

---

### You Can Do These Yourself:

#### 1. Update Text Content:

- Titles, descriptions, labels
- Impact statistics numbers
- Focus area content

#### 2. Add/Remove Items:

- New tweets (just add ID and date)

- New gallery images
- New resources (articles, reports, videos)
- New partners

### 3. Update Images:

- Replace existing images (same file name)
- Add new images to gallery
- Update hero carousel images

### 4. Update Links:

- Partner website URLs
- Video URLs
- Download links for reports

## Requires Technical Help:

### 1. Design Changes:

- Changing colors, fonts, layout
- Moving sections around
- Changing animations

### 2. New Features:

- Adding new sections
- Creating new pages
- Adding new functionality

### 3. Technical Issues:

- Website not loading
- Images not showing
- Errors in code

### 4. Major Updates:

- Changing the overall structure
- Updating the framework/technology
- Security updates

## When in Doubt:

- Simple text/image updates: You can do it
- Anything that changes how things look or work: Ask for help

## Common Issues & Solutions

---

### Issue: Image Not Showing

#### Possible Causes:

##### 1. Wrong file path:

-  Correct: `"/image.jpg"` (starts with `/` )
-  Wrong: `"image.jpg"` or `"./image.jpg"`

##### 2. File not in public folder:

- Make sure image is in `public/` folder

##### 3. File name mismatch:

- Check spelling (case-sensitive on some servers)
- Check file extension ( `.jpg` vs `.jpeg` )

#### Solution:

- Double-check the file path in code matches the actual file location
- Ensure file is in `public/` folder

### Issue: Tweet Not Showing

#### Possible Causes:

##### 1. Wrong Tweet ID:

- Make sure you copied the full ID from the URL

##### 2. Date format wrong:

- Must be: `YYYY-MM-DD` (e.g., `2025-11-15` )

- Not: 11/15/2025 or 15-11-2025

### 3. Tweet is private/deleted:

- Make sure the tweet is public

#### Solution:

- Verify Tweet ID from the URL
- Check date format is correct
- Ensure tweet is public

## Issue: Changes Not Appearing on Website

#### Possible Causes:

##### 1. File not saved:

- Make sure you saved the file after editing

##### 2. Website not redeployed:

- After making changes, the website needs to be redeployed
- This might happen automatically or require manual deployment

##### 3. Browser cache:

- Try refreshing the page (Ctrl+F5 or Cmd+Shift+R)
- Or clear browser cache

#### Solution:

- Save all files
- Check if website needs to be redeployed
- Clear browser cache and refresh

## Issue: Code Looks Broken After Editing

#### Possible Causes:

##### 1. Missing comma or bracket:

- Check that all items in arrays have commas
- Check that all brackets `{ }` and `[ ]` are closed

## 2. Wrong quotes:

- Use regular quotes `"text"` not fancy quotes `"text"`

## 3. Typo in code:

- Check spelling of words like `title` , `description` , `image`

### Solution:

- Compare your code with the original
- Check for missing commas, brackets, or quotes
- If stuck, revert to backup and try again

## Quick Reference Checklist

---

### Before Making Changes:

- [ ] Made a backup of the file
- [ ] Understand what I'm changing
- [ ] Have the correct file paths for images

### When Adding Content:

- [ ] Image is in `public/` folder
- [ ] File path starts with `/`
- [ ] All commas and brackets are correct
- [ ] Text is properly quoted with `"text"`

### After Making Changes:

- [ ] Saved the file
- [ ] Checked for errors
- [ ] Website is redeployed (if needed)
- [ ] Tested on the live website

# Getting Help

---

## If You're Stuck:

### 1. Check This Guide First:

- Most common issues are covered here

### 2. Compare with Existing Code:

- Look at how similar items are formatted
- Copy the format and modify the content

### 3. Ask for Technical Support:

- If something isn't working, it's okay to ask for help
- Provide details: what you tried, what error you see

## Information to Provide When Asking for Help:

- What you're trying to do
- What file you edited
- What error or issue you're seeing
- Screenshot if possible

## Additional Tips

---

## Best Practices:

### 1. Keep Backups:

- Before making changes, copy the file
- Or use version control (Git) if available

### 2. Test Small Changes:

- Make one change at a time
- Test it before making more changes

### 3. Use Descriptive Names:

- For images: training-session-2025.jpg not img1.jpg
- For variables: Keep them clear and meaningful

#### 4. Keep Formatting Consistent:

- Follow the existing code style
- Use the same format for similar items

#### 5. Document Your Changes:

- Note what you changed and when
- This helps if you need to revert or remember later

## Learning Resources

---

### Basic Concepts:

#### Arrays (Lists):

```
const items = [  
  { name: "Item 1" },  
  { name: "Item 2" },  
  { name: "Item 3" }  
];
```

- Items are separated by commas
- Lists are in square brackets [ ]

#### Objects (Items with Properties):

```
{  
  title: "My Title",  
  description: "My description",  
  image: "/image.jpg"  
}
```

- Properties are separated by commas
- Objects are in curly brackets { }
- Text values are in quotes "text"

**File Paths:**

- /image.jpg - Image in public folder root
- /folder/image.jpg - Image in subfolder
- Always start with / for public folder files

## Final Notes

---

**Remember:**

- Most content updates are straightforward
- When in doubt, compare with existing code
- It's okay to ask for help with technical issues
- Small, incremental changes are safer than big ones

**You've Got This! 💪**

With practice, updating content will become easier. Start with simple text changes, then move to adding images and new items.

**Last Updated:** November 2025 **For Questions:** Contact your website developer
